Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Urease (EC 3.5.1.5) 11K chain [validated] - Klebsiella pneumoniae
N;Alternate names: urea amidohydrolase; urease chain A; urease gamma chain
C;Species: Klebsiella pneumoniae
C;Species: Klebsiella pneumoniae
C;Accession: A36138, 832938
R;Mulroney, S.B.; Hausinger, R.P.
J. Bacteriol. 172, 5837-5845, 1990

Immun. 62:1631-1638(1994).
-!- CATALYTIC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).
-!- SUBGUNIT: Heterodimer of an alpha subunit and a beta subunit.
-!- SUBCELLULAR LOCATION: Cytoplasm (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasm (By similarity).
-!- SIMILARITY: In the N-terminal section; belongs to the urease gamma subunit family.
-!- SIMILARITY: In the C-terminal section; belongs to the urease beta subunit family.
-!- CAUTION: In Helicobacter the alpha subunit is what is known, in other bacteria as the beta subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Solnick J.V., O'Rourke J., Lee A., Tompkins L.S.; "Molecular analysis of urease genes from a newly identified uncultured species of Helicobacter.";

Similarity).
SUBCELULAR LOCATION: Cytoplasm (By similarity).
SUBLERLULAR LOCATION: Cytoplasm (By similarity).
SIMILARITY: In the N-terminal section; belongs to the urease gamma subunit family.
SIMILARITY: In the C-terminal section; belongs to the urease beta subunit family.
CAUTION: In Helicobacter the alpha subunit is what is known, in other bacteria as the beta subunit.

                                                                                                                                                                                                                                                                                                                                                                                                                                        61 CMHFLKKDEVMPGVGNMVPDLGVEATFPDGTKLVTVNWPIEP-DEHFKAGEV--KFGCDK

-!- SIMILARITY: In the N-terminal section; belongs to the urease gamma subunit family.
-!- SIMILARITY: In the C-terminal section; belongs to the urease beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          subunit family.
-!- CAUTION: In Helicobacter the alpha subunit is what is known, in
other bacteria as the beta subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 X-RAY CRYSTALLOGRAPHY (3.0 ANGSTROMS), AND SUBUNIT STRUCTURE.

Cattoli G;

Kusters JG,

Novel Helicobacter felis urease X and Y subunit polypeptides, useful in the diagnosis of Helicobacter felis infections and in the preparation of vaccines.

Claim 10; SEQ ID NO 3; 76pp; English.

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis in Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an urease Y subunit polypeptide of the invention.

Sequence 568 AA;

                                                                                                                                               The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                               The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis in Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DENTLDLVITNAMIIDYTGIYKADIGIKNGKIHGIGKAGNKDMQDGVSPHMVVGVGTEAL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an

```

```
Novel isolated nucleic acid molecule having urease gene cluster, and conferring on Helicobacter bizzozeronii ability to produce urease, useful as vaccine for preventing disease in mammals infected by H.bizzozeronii.
```

Claim 24; SEQ ID NO 5; 40pp; English

Helicobacter bizzozeronii an ability to produce urease, where the nucleic acid molecule is a urease gene cluster comprising at least one urease structural gene and at least one urease accessory gene. The nucleic acid molecule is chosen from urea, ureb, ureb, urep, ured, ureh and urel. The nucleic acid, a vaccine for preventing onset of disease in mammals infected by H. bizzozeronii comprising a nucleic acid and a carrier, and an isolated by Edizozeronii comprising a nucleic acid and a carrier, and an isolated antibody or its binding portion raised against the nucleic acid. The nucleic acid, proteins and antibodies are useful for vaccinating mammals against onset of disease caused by infection of H. bizzozeronii, which involves administering the sequences. The sequences are useful for detecting H. bizzozeronii in a sample of tissue or body fluids which involves providing a nucleotide sequence as a probe in a nucleic acid as an artigen, providing an acideotide sequence as a probe in a nucleic acid chypridisation assay, contacting the sample with the antigen or the probe, and detecting any reaction which indicates that H. bizzozeronii ureB present in the sample. This sequence represents the H. bizzozeronii ureB invention relates to an isolated nucleic acid molecule conferring

Vectors, e.g. pQRV314 (see also AAT44351), carrying the gene locus can be used to transform host cells for the large-scale prodn. of recombinant, enzymatically inactive, multimeric urease. The urease complex induces a mucoscal immune response that can treat or prevent Helicobacter, esp. H. pylori, gastroduodenal infection. (Updated on 16-OCT-2003 to standardise OS field)

                                    This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and arrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products on also be used for detection and diagnosis
                                                                                                                                                                                                             363 SQAMGRVGEVITRTWQTADKNXKÆFGRLKÆEKGDNDNFRIKRYLSKYTINPALAHGISEY

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid nucleic acid; (2) a host cell containing the vector; (3) an isolated or its fragment whose expression is inhibited by the antisense copypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding cate prolypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for copying a gene product or that has an activity against a biological pathway crequired for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation, or that inhibits proliferation of an oranism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture compound straining the extent or compound's activity; (11) a culture compound that inhibits in which the exent or which each of the strains is present in a culture or collection of a proliferation; or a gene or which each of the strains is present in a culture or collection of a proliferation; or an expressed or underexpressed, or empound that inhibits the extent or which each of the strains is present in a culture or collection of a proliferation of an organism or the argent of a compound that inhibits the
                                                                                                                                                                                                                                              New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             122 GEGMIITAGGIDSHTHFLSPQQFPTALANGVTTMFGGGTGPVDGTNATTITPGKWNLHRM 181

preparation (e.g. a vaccine) for treating or preventing H. pylori infections. The antigen or its fragment may also be used for isolating, purifying and/or identifying an interaction partner of the hyperimmune serum reactive antigen or fragment; for generating a peptide binding to the hyperimmune serum reactive antigen or fragment; for generating a peptide binding to the hyperimmune serum reactive antigen or fragment where the peptide is selected from anticalines; for manufacturing a functional nucleic acid selected from antipophenes; or for manufacturing a functional ribonucleic acid selected from ribozymes, antisense nucleic acids and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     361

Pylori and which suppresses proliferation of H. Pylori and which cuppresses urease activity of H. Pylori by an immune reaction. Also included are a gene which encodes the urease fragment, a vaccine against H. Pylori comprising the urease fragment, a transformed cell transformed by introducing the gene, an antibody which recognises the urease fragment and transforming a plant by introducing the gene into the plant and making it express. The urease fragment is useful for producing blood serum containing antibodies which suppresses proliferation of H. Pylori and which suppresses urease activity of H. Pylori which involves immunising a living organism (e.g. a human, cow or hen) with the urease immunising a living organism (e.g. a human, cow or hen) with the urease criminals expressing the fragment. H. Pylori is thought to be a cause of gastric and peptic ulcers, gastritis and may be implicated in stomach cancer. The urease enzyme is thought to be responsible for maintaining the bacterium in the acid conditions of the stomach. The present sequence is the H. Pylori urease beta subunit from which the

a Helicobacter antigen, and parenterally administering to the mammal a comprising anticle action belocute antigen. Also included is an attenuated Salmonella vector comprising an uncleic acid molecule encoding a Helicobacter antigen. The Helicobacter antigen is a urease, a urease subunit, or its immunogenic fragment (encoded by the ureA and ureB genes). The mammal is at risk of fargment (encoded by the ureA and ureB genes). The mammal is at risk of carrier in the attenuated Salmonella vector further comprises an hira or infection. The attenuated Salmonella vector further comprises an hira or nieB promoter. The vector can be used to treat the cobacter infection. The vector and the west to treat the cobacter infection. The vector and the method can be used to treat their cobacter infection. The vector and the method can be used to treat their cobacter infection. The vector and the method can be used to treat their cobacter induced gastroducdenal diseases, including acute, chronic or atrophic gastritis, peptic ulcer diseases (e.g. gastric or ducdenal culcers), and gastric carcinoma. Attenuated Salmonella vector pHUR3 was constructed expressing UreA and UreB and including an B. coli AmpR gene. The present sequence represents a protein or peptide encoded by the pHUR3
                                                                                                  422
                                                                                                                                                                                                    481
                                                                                                                                                                                                                                                                                                 482

The composition may include the UreA protein (AAR74336), a ureaseassociated heat shock protein (AAR7438-39) or the UreI protein (AAR74340). The composition is used to prepare a vaccine for humans or animals, especially against H. pylori and H. felis. Antibodies against the proteins may be used for treating Helicobacter infection, and primers/probes to the DNA sequence may be used for detection of Helicobacter infection. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunogenic composition against Helicobacter infection - also gene fragment(s) and protein(s) from Helicobacter urease gene cluster and heat shock protein(s).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         241

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              118,
